Complexity of Simplicity

Builds Automated Intelligent Washer Manufacturing Line

Ad at page 138

Washers are the most basic but indispensable part of fasteners. Recognizing the importance of washers in industrial applications, SSF Industrial Co., Limited. has been actively engaged in the production and sales of carbon steel and stainless steel washers for over 20 years, providing domestic and overseas customers with standard and non-standard products meeting the international standards of the U.S., Germany, France, etc. At present, it can provide products in sizes of M2-M100, with the hardness of 100HV-420HV, and with natural color, galvanized, mechanical galvanized, hot dip galvanized black oxide, and Dacromet surface treatments. In addition to washers, its product lineup has been also extended to include all kinds of stamped parts in response to market demand. Recently, it has successfully developed a new type of wood structure connecting part with very positive market expectation.

1,800 Tons of Monthly Capacity

Mainly Sold to Europe and the U.S.

With a total area of 35,000 sq. m and around 100 employees, SSF's factory is located near the most important distribution center for stamped parts in Northern China, making it easier to obtain raw materials at more competitive prices. In addition, 35 sets of numerical control stamping machines, a professional laboratory with calipers, hardness testers, zinc layer testers, salt spray testers and sorting machines, together with the production technology and experience accumulated over the years, have not only optimized SSF's production lines and operational efficiency, but also enabled it to strictly control the quality of products, which has always put it in the leading position in the industry. Its current production capacity is 1,800 tons per month, with over 95% of the production going to the U.S. and Europe.

"Our strength is not only the ability to provide customers with competitively priced products, but also our stable delivery, excellent service, and intelligent management which are why our customers choose us. On one hand, we plan to build an automated and intelligent factory to upgrade our production line, and on the other hand, we continue to develop new products and hope to explore more overseas markets," said SSF Sales Manager Lilian Zheng.

New Product Line- Wood Structure Connecting Part

As an ISO 9001:2015 certified company, SSF has not only introduced advanced equipment and expanded its factory in 2022, but has also recently extended the development to wood structural connecting parts and successfully developed new products, actively demonstrating an attitude of keeping up with the times to the market.

"Although the market entry barrier for wood structure connecting parts is high, it is not a difficult task for us. In the future, we will go deeper to understand the market and conduct technical analysis, so that we can get CE and ETA certifications for our new products and gain access to the European market. This is a new challenge and an opportunity. We will continue to improve our technology and production capability to meet the needs of more customers for precision products. The market is constantly advancing and we will definitely keep pace with it," said Zheng.

"We always believe that fasteners are the most basic but indispensable part of industrial development, and as long as there is construction, there will be demand. Manufacturing is an industry where challenges and opportunities coexist. We have survived the industry's winter and market depression, and we believe that the future will be definitely getting better," added Zheng.
