

具成本、技术优势 宁波崧隆木用、建筑、新能源螺丝

Featuring Cost & Technology Advantages NINGBO SUNLONG Timber, Construction, and New-Energy- Industry-Use Screws

With its factory close to major ports in Ningbo, Shanghai, and Hangzhou, Ningbo Sunlong Imp and Exp Co., Ltd specializes in all kinds of carbon and stainless steel screws and composite welded screws (e.g. wood construction screws, sandwich panel screws, A2/A4/A8 stainless steel screws...etc.). It mainly produces products in sizes of 3.0-10.0mm and lengths of 10-600mm, which have been widely used in wood, roofing and other new energy industries such as solar power, photovoltaic and other energy storage fields. The reliable quality, good reputation and competitive prices have made many domestic and overseas customers willing to become long-term partners of Sunlong, leading to the increase in its product export year after year. Ningbo Shengtai Fastener Technology Co., Ltd. (TARIC Code C821), the parent company of Sunlong, is also well known in the industry, and has over 30 years of history in the production of various types of drilling screws, wood screws and non-standard screws.

CE Certified

Designated for Collaboration by Leading U.S. & European Companies

Sunlong's factory has an area of around 16,500 sq. m and about 60 people are currently employed. In order to meet the huge demand from global customers, ensure a more efficient manufacturing process and guarantee perfect production quality, its factory has introduced nearly 100 sets of professional fastener processing equipment such as fastener straightening machines, cold headers, large extension cold headers, large extension thread rolling machines and extra long washer assembly machines. At present, its average monthly output reaches more than 700 tons.

In addition to being certified by the ISO9001 quality management system and China's GB standard, Sunlong has also obtained the CE certificate and has established long-term cooperation with many major EU manufacturers. Moreover, Sunlong's products have been also sold to N. America, S. America, Southeast Asia, East Asia, the Middle East, Oceania and Africa. "Europe, the Middle East and Russia are our main markets now. We'll continue to participate in key exhibitions in Germany, Poland, the Middle East and Moscow to actively expand our overseas markets," said Manager Du.

New Product Release

Showing Technical Development Strength

In addition to receiving orders, Sunlong also continues to develop new products. Recently, it has successfully released new stainless steel welded self-tapping screws and self-drilling screws. The new products feature a single screw made of two different materials. Although this is a new requirement and challenge for material nature, production process and surface treatment technology, the technical development team of Sunlong has successfully made it!

"We have the cost advantage to offer our customers a better price/performance ratio for mature products with high usage (e.g. carbon steel screws). For new products, we have the technical strength of our professional team, which can be translated into production capabilities. New areas are a challenge for all of us, and the global environment is putting higher demands on the survival of enterprises. The only way to deepen and expand on the existing market is to continue to invest in R&D and develop new products; as a result, we can find our own competitive track," said Ms. Du.

At the closing of the interview, Du also noted, "Fastener World Magazine is very good at facilitating communication between fastener buyers and sellers. I hope in the future Fastener World can continue to provide more industry and product info to boost the development of the fastener industry together."
