FASTWELL

Automation Upgrades for an Advantageous Supply System

順承企業自動化升級打造優勢供應體系

► Deepening Roots in Europe & the U.S., Bullish on Southeast Asia's Potential

Linkwell, with its full range of fasteners, multi-site (including Taiwan, China, Indonesia, Malaysia, Vietnam, etc.) production lines, and one-stop services, has been deeply rooted in the construction and industrial markets for 49 years, earning high praise and trust from numerous global clients. In 2025, the fastener industry faced unprecedented political and economic turbulence, with fluctuating demand in Europe and America impacting orders for Taiwanese suppliers. However, Linkwell relies on its business resilience to continue providing stable supply to its European and American clients. President Kosky Yen stressed: "Drawing on nearly half a century of global trade experience, we've observed that overseas fastener demand fluctuates but follows an overall upward trend. Europe and America remain the largest demand markets and won't disappear—we will always be the most reliable backbone for our clients there!"

► Competitive Supply System Enables Global Adaptability

Moreover, Linkwell has long laid out its strategy in the Asian market, optimistic about the steady continuous growth in Southeast Asian fastener demand in recent years. It has established factories in Malaysia, Vietnam, and Indonesia, positioning them as a solid foundation for stable business growth—a clear positive for Linkwell.

Southeast Asian countries, particularly Indonesia, Malaysia, Vietnam, and Thailand, impose extremely strict environmental regulations on foreign-invested factories. Linkwell's factories in these Southeast Asian nations have been cultivated for years, with their fastener products meeting high self-standards in environmental technology and quality, giving the company a key competitive edge in the Southeast Asian market. The Taiwan headquarters leverages support from diverse partner factories to achieve a complete production supply chain. By integrating sites in Taiwan, China, and Southeast Asia, Linkwell has built a one-stop supply chain that flexibly meets global clients' diverse needs in quality, cost, environmental protection and volume.

► Responding to Energy Savings & Carbon Reduction with Digital Systems

To comply with the EU's CBAM, Linkwell engaged professional consultants for guidance and required all factories to jointly promote energy savings and carbon reduction. Meanwhile, in response to client demands, it actively introduced ERP systems into its plants and production processes, demonstrating its commitment to sustainable operations.

► Brand Management Drives Business Upgrades

Facing various competitions and uncertainties from U.S.-China trade tensions, Kosky believes that the "strength of stability" and "solidifying brand reputation" are the keys to a company's sustainability. Therefore, Linkwell is upgrading equipment automation to reduce labor costs and enhance quality stability. Looking ahead to future challenges, Linkwell looks forward to forging even closer ties with its partners to achieve new successes. □
