

JC Grand-

Manufacturer and Exporter of Fasteners and Hardware with a Self-owned Plating Facility

Booth No. 846

JC Grand is a leading Taiwan-based manufacturer and exporter of industrial fasteners and metal hardware components. Since 1978, for nearly 50 years, JC Grand has been serving customers globally with high quality screws, bolts, washers, nuts, anchors, and customized hardware products from its wholly-owned factories in Asia. All locations are ISO9001 and IATF16949 certified, and focused on cost-effectively delivering products and services of exceptionally consistent quality to our clients.

Internal production capabilities include cold heading, thread rolling, secondary operations including drill point forming, heat treatment (neutral hardening, carburizing and carbo-nitriding), zinc-tin alloy plating, dip-spin organic topcoats, washer assembly, optical sorting, custom packaging and worldwide logistics. Current production and export average ~ 300 containers per month. US customers collectively consume nearly 1/3rd of production; if one includes the entire North American market, that ratio increases to 40%. Europe, in and outside the EU, continues to be a large market, as well as South America, Australia, New Zealand, Japan and, increasingly, Southeast Asia. But North America still remains JC Grand's most consequential market.

JC Grand's proprietary ZNK+ alloy plating facility opened in Kaohsiung in 2023, focused on the prevention of fastener corrosion in severe outdoor environments. Monthly production capacity has since doubled in early 2025 to more than 800 tons per month, and is being increasingly employed in more extreme ISO Class 4 and 5 environments (salt spray requirements in excess of

2000 hours) in North American, European, Australia and New Zealand markets.

JC Grand's priorities at the IFE 2025 in Las Vegas include meeting with existing customers, exchanging industry information (including tariffs and current pricing), and updating clients about JC Grand's production expansion both inside and outside of Taiwan. JC Grand is looking to expand its sales channels in professional construction, DIY packaged fasteners, HVAC and industrial, especially for applications that are exposed to extreme weather.

Our customers are always looking to differentiate their product portfolios and lower their overall costs of purchasing, while adding value whenever possible. This year's focus is on introducing expanded capacity of JC Grand's proprietary ZNK+ zinc-rich multi-metal alloy coating system. JC Grand is also working closely with customers in the US market to optimize supply chain activities to reduce the burden of higher import tariffs.
