

Reputable Services for

Mission-critical Parts Sourcing & Trading

Having served the fastener industry for 12 years, customers rely on U.S. Fastener Import & Trading Company (USFITC) to source, import, or export industrial fasteners, marine & rigging hardware, bearings, and aerospace & defense components. USFITC provides U.S. and global customers with screws, bolts, nuts, washers, anchors, springs, and custom parts sourced from its associate Taiwanese manufacturers. The company also acts as an *authorized agent in the U.S. for Mizumoto Machine Mfg. Co., Ltd. (Japanese stainless steel chains and hardware producer), Jennweir Co., Ltd. (Taiwanese bearing supplier) and Elevate International (Taiwanese construction screws supplier).* Strictly adhering to U.S. export control laws (incl. ITAR and EAR), USFITC's export division procures fully-certified and traceable hardware (e.g. MS, NAS and AN parts) for approved international high-level end users in aerospace and defense sectors.

Based in California, *most of USFITC's sales focuses on domestic and international aerospace and defense sectors.* Its strengths to rapidly source, manage, and deliver critical parts enable the team to better support growing demand for highly specialized U.S.-origin fasteners. Moreover, its expertise in sourcing hard-to-find and mission-critical aerospace and defense parts, as well as its efficiency, reliability, creativity, and a customer-centric mindset make it stand out from competitors.

"For sourcing industrial fasteners, we work closely with our Taiwan-based suppliers through clear communication, early alignment on requirements, and standardized processes. This coordination helps us cut lead times, ensure accuracy, and respond quickly to customer needs, making the sourcing process efficient and client-driven," said USFITC President Vivian Chen.

USFITC works to offer clients the most suitable solutions to keep their projects moving forward. The company maintains an open attitude towards collaboration and expects to expand its role in aerospace and defense supply chains while continuing to support industrial and marine sectors. ■
