

Company Focus >>

With more than 40 years of company history, Ing-Hwei was once a manufacturer of DIY hand tools. However, the drastic market change 20 years ago forced Ing-Hwei to determine to devote itself to manufacturing specialty tools and continue to focus on the R&D of double sockets wrenches and punches. With the investment of efforts and capital, Ing-Hwei is now able to offer a complete range of products and continue the improvements in tools which all users could feel satisfied with.

Having its products compliant with German DIN standards and continuously improving the quality of its specialty tools, Ing-Hwei has nowadays been widely recognized by the aftermarket in Europe and exports products throughout the world. Its products are made of chrome-vanadium steel featuring high strength, tenacity and anti-wearing. Its manufacturing procedures are strictly monitored and controlled and requirements are followed at every step. "Our hand tools are manufactured according to the standards of every manufacturing procedure. As we insist on offering high quality products, we can thus stand out on the market!" According to Ing-Hwei, being professional and offering high quality are two principles Ing-Hwei has been always adhering to and this is why Ing-Hwei can still be unbeatable on the ever-changing market.

Other than making its product line more complete, Ing-Hwei is also a very good listener to the demand of end-users and will do its best to develop products with more surprising design that best fit users' demand. As a result, Ing-Hwei has recently released a new extra long double flexible wrench (30% longer than general wrenches), which is good news to applications in deep and confined areas. In addition, it has also developed a new handle which can be assembled with various heads of hand tools, making operation easier and reducing the need to bring large-size tools in applications.

Ing-Hwei's double flexible wrenches are available in various sizes and the sockets at both ends are adjustable, making operation easier. According to Ing-Hwei, "The current market is still price-oriented, but we will strive to go toward the development and design that are of higher added value and more ergonomic."

Ing-Hwei Implements Mfg. Corp. lanza una llave extendida de doble zócalo Herramienta profesional de calidad con nivel de DIN alemán.

Por Naiwen Zhang, Fastener World

Established more than 40 years ago, Ing-Hwei produced manual tools for home improvement in the past. Twenty years ago, Ing-Hwei invested heavily in the production of professional tools due to the rapid changes in the market, and continued to focus on double-headed socket wrenches and punches. With much investment in spirit and funds, currently the products of Ing-Hwei have complete sizes and are constantly improved to make tools that are satisfactory for all users.

To meet DIN German standard, Ing-Hwei constantly improves the quality of its professional tools. Since then until now, the quality of Ing-Hwei has been recognized by the European automobile repair professional market and its products are sold worldwide. The material is made of chrome-vanadium steel with excellent integral strength, such as high strength, tenacity and wear resistance. The manufacturing process is rigorous and follows all steps. "Our manual tools are manufactured according to every manufacturing procedure. We insist on offering high quality products, so we can stand out in the market!" According to Ing-Hwei, professionalism and quality are two principles Ing-Hwei has always adhered to and this is why Ing-Hwei can still be unbeatable in the ever-changing market.

In addition to developing complete products, Ing-Hwei is also a good listener to the needs of end-users and will do its best to develop products with more surprising designs that best fit users' needs. As a result, Ing-Hwei has recently released a new extra long double flexible wrench (30% longer than general wrenches), which is good news for deep and confined area applications. In addition, it has also developed a new handle that can be assembled with various heads of hand tools, making operation easier and reducing the need to bring large-size tools in applications.

The double-faced wrenches of Ing-Hwei are available in various sizes and the sockets at both ends are adjustable, making operation easier. According to Ing-Hwei, "The current market is still price-oriented, but we will strive to go toward the development and design that are of higher added value and more ergonomic."
