RoHS and SGS Certified; Optimal Realization of Quality, Efficiency and Safety

Casters are often used in high load areas such as automated machinery & equipment, industrial manufacturing, transportation and logistics, semiconductors, sports equipment, food processing, etc., and their durability, safety, and service life are the most important concerns of customers. In order to meet the needs of industrial customers, Cyun Hong's products are manufactured with RoHS compliant materials and sent to a third-party organization, SGS, for rigorous testing before leaving the factory to ensure that every product delivered to customers meets the international requirements of various standards and parameters.

"Stability, safety and ease of use have always been our most important considerations. It is our corporate policy to ensure that our customers can use our products with confidence and peace of mind, and to be a good partner of our customers," according to Cyun Hong.

Numbers Speak for Themselves. Strengths Approved with Real Testing Results

Cyun Hong has been insisting on innovation all along the way, and now owns many patents such as quick release caster structure, caster height adjustment mechanism, caster turntable assembly, contact structure of adjustable leveling feet, etc. Cyun Hong has not only introduced CAE (computer-aided engineering) software into its manufacturing process to help product development analyses and design optimization at an early stage, but also cooperated with many academic institutions to obtain relevant research data to make product development more in line with the actual needs of customers in the ever-changing market, and therefore, Cyun Hong's casters and adjustable leveling feet have delivered excellent data performance in many of the actual product tests.

In two recent test reports, **Cyun Hong's casters demonstrated excellent "less than yield" performance under the 1,000 kg equivalent stress experimental condition, while its adjustable leveling feet also demonstrated "less than yield" performance under the 3,000 kg equivalent stress and 0 degree and 15 degrees loading angles conditions.**

Looking forward to 2024, Cyun Hong will not only continue to develop more overseas customers and create opportunities to work with more customers in the industry, but also invest more efforts in the development of high-quality and innovative products, in the hope of providing the market with more quality choices, and developing a wider international market share for its high-quality casters and adjustable leveling feet. **□**

With the business philosophy of "Innovative Design, Reliable Quality, and Attentive Service", Cyun Hong Enterprise Co., Ltd. has been producing professional industrial-use casters and adjustable leveling feet for many years to help the global customers gain presence in their own markets, and is also one of the seemingly insignificant but actually important pillars behind the success stories of many industries.

Headquartered in Taichung, the company has offices throughout the north, central and south of Taiwan, and has an eye on the global market. **It mainly manufactures and supplies TPR rubber/PU/nylon/conductive rubber and other high temperature-resistant casters of specifications between 1.5 inches and 8 inches, as well as galvanized, yellow zinc plated, and stainless steel adjustable leveling feet, etc.** In addition to standard products, Cyun Hong's professional service team can also provide OEM customized services according to customers' different product design and development characteristics and needs.
